Harmony Email & Collaboration
for Microsoft 365

Harmony
Email & Collaboration

THREATS

PHISHING
Harmony Email & Collaboration uses advanced AI and machine-learning models trained on attacks that get past Office 365, analyzing over 300 indicators per message. Deploys between the inbox and native security to secure inbound, outbound and internal email from the most sophisticated attacks that evade Microsoft.

ZERO-DAY MALWARE & RANSOMWARE
Multiple real time malware, sandboxing, and A.I. active-content analysis tools work in parallel to identify and stop ransomware and malicious content.

ACCOUNT TAKEOVER / INSIDER THREAT
Harmony Email & Collaboration analyzes every user event across multiple SaaS, comparing historical behavior, anomalous activity, and profiles of real-world breaches to identify attacks in real time.

DATA SECURITY

DATA LEAK PROTECTION
Identify confidential data using industry- leading tools. Enforce regulatory compliance (PCI, HIPAA, SOX, etc.) across all your SaaS with cloud-aware, context-sensitive, policy work flows.

POLICY-BASED ENCRYPTION
Automate the encryption of sensitive files — whether shared internally, via email, or public share — without deploying new infrastructure, using the protocols you already know and trust.

GOVERNANCE

SHADOW IT
Identify risky cloud services your employees are using in the office or at home that have been connected to your approved SaaS accounts, without redirecting traffic or using a proxy.. Be notified when an employee is logging in from an unusual location, or when they perform erratic behavior.
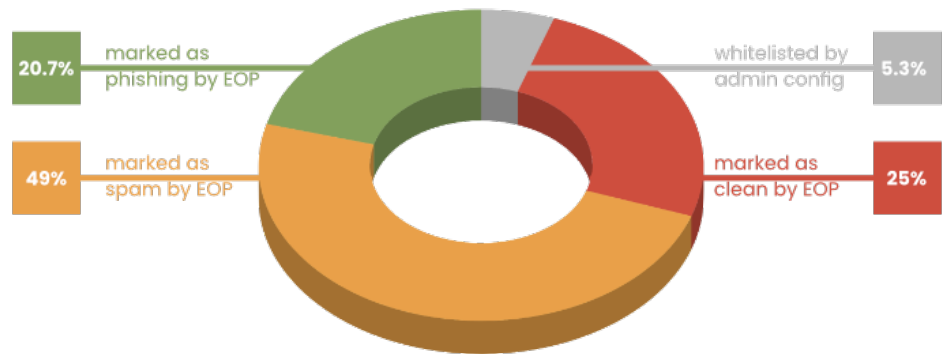

SIEM INTEGRATION
Harmony Email & Collaboration correlates user and file events from all SaaS, combining them with real-time reports of the security stack, so you can monitor the cloud with your existing SIEM.

If you're using Microsoft 365, should seriously consider Harmony Email & Collaboration's email security. Don't wait until you're under attack. The included Microsoft email security is not sufficient. You need something like Harmony Email & Collaboration.

— IT Administrator, Information Services

20.7% marked as phishing by EOP	whitelisted by admin config **5.3%**
49% marked as spam by EOP	marked as clean by EOP **25%**

30.3% of phishing emails sent to organizations using Office 365 EOP were delivered to the inbox.

Harmony Email & Collaboration offers complete, defense-in-depth security for Microsoft 365 Workspace, whether you use email, OneDrive or Teams.

Scan every inbound, outbound and internal email. Prevent phishing and malware from spreading within your organization or to your customers and partners.

Check every file for malicious content using the most advanced sandboxing and active-content analysis in the industry. Quarantine threats before your users download them. Leverages Check Point's ThreatCloud to identify and stop zero-day files and threats before anyone else

Identify confidential information and apply context-aware policies that confine the data to a particular organization or work group. Your users can leverage the full power of Microsoft's collaboration, while automated work flows enforce regulatory compliance, ensuring PCI, HIPAA, PII, or other protected content does not leak.

With Harmony Email & Collaboration, reduce phishing hitting the inbox by 99.2%. Stop the number one threat leading to breaches and ransomware. Ensure all lines of business communication is protected. This is how

Harmony
Email & Collaboration

Protect Office 365 from **the inside**

Catch the sophisticated attacks that default and advanced security tools miss, while adding an invisible layer of security for cloud-based collaboration suites.

A multi-layer, artificially intelligent solution, Harmony Email & Collaboration deploys in minutes and scales across enterprise architectures to prevent the attacks that bypass conventional security solutions.

Full-Suite Protection

Manage data leakage, malware, and account takeover via a single threat intelligence interface. Robust protections extend to file-sharing and chat.

Patented technology built specifically for the cloud

Harmony Email & Collaboration connects to your environment via API and scans for threats after your existing security — but before the inbox. It is laser-focused on advanced attacks like ransomware and BEC, while leveraging Check Point's industry-best malware tools. Harmony Email & Collaboration's industry-leading innovations, also allow for pre-existing threats to be clawed out of inboxes.

Secure Email Gateway — Default Security — Harmony Email & Collaboration
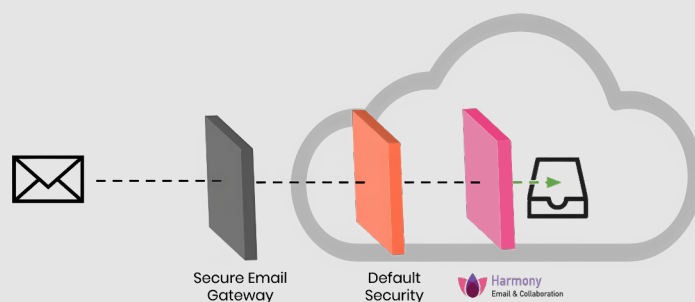

"When you combine the over-the-top customer experience and customer focus and the effectiveness of the solution, it's just hands-down one of the best things we've had when it comes to protecting email."
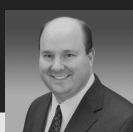

Dan Meacham, CSO, Legendary Entertainment
