

HCL AppScan Enterprise

Effectively manage large-scale application security testing with a proven solution to mitigate risk and achieve regulatory compliance.

Overview

HCL AppScan Enterprise delivers scalable application security testing with powerful scanning engines and risk-management dashboards for improved visibility into risk and compliance. Security and development teams can use HCL AppScan Enterprise to collaborate, establish policies, and scale testing throughout the application lifecycle. Enterprise dashboards classify and prioritize application assets based on business impact and identify high-risk areas to maximize remediation efforts. HCL AppScan Enterprise's thorough suite of REST APIs integrates seamlessly into the DevOps pipeline for automated security testing and a robust DevSecOps solution.

Benefits

- ◆ Strengthen your security program
 - ◆ Reduce the time to find and remediate vulnerabilities in applications
 - ◆ Scale your dynamic analysis testing program
 - ◆ Make informative, risk-based decisions
 - ◆ Reduce the overall risk of costly data breaches
 - ◆ Provide centralized security control
 - ◆ Remediate security vulnerabilities before attackers can discover and exploit them
 - ◆ Shift-left application security testing
 - ◆ Achieve regulatory compliance
 - ◆ Mitigate application security risk
-

Features

Scalable Application Security Testing

HCL AppScan Enterprise is a scalable, enterprise-level solution that allows organizations to manage their application security program for all their applications. Security and development teams can collaborate, establish policies, and scale testing throughout the application lifecycle. HCL AppScan Enterprise provides centralized control with advanced application scanning and remediation capabilities. HCL AppScan Enterprise's unique slider capability allows a customizable balancing of testing speed and accuracy for maximum effectiveness, and incremental scanning capabilities focus testing efforts only on application code that has been changed.

Incorporate Application Security Testing into DevOps

Comprehensive REST APIs enable testing automation and full control of on-boarding and auditing activities. HCL AppScan Enterprise allows DevOps CI/CD tools to trigger security testing integrated into the pipeline. The HCL AppScan issue gateway assists with pushing critical issues into Issue Management systems for remediation.

Detailed Security Reports and Enterprise-level Dashboards

HCL AppScan Enterprise helps classify and prioritize application assets based on business impact and identify high-risk areas. Organizations can import and manage reports from other AppScan and third-party products. Performance metrics measure progress and provide visibility into the security and compliance risks presented by identified vulnerabilities.

Risk-based Application Security Management

HCL AppScan Enterprise helps define risk based on an organization's customized strategy. A measure for risk can be determined on an application by factors such as access, business impact, or significance of security threats. These factors can be customized and programmed into HCL Enterprise's analysis. Managers can define rules to measure risk and then automatically classify or rank applications based on that risk to help them make reliable and resource-efficient decisions.
