What's New in WS_FTP Server 2020.0.0 (8.7.0)

The WS_FTP Server 2020.0.0 (8.7.0) release focused on security vulnerabilities and customer issues to ensure that all security updates were applied to provide users with a secure and quality product.

The following are the main security enhancements and bug fix highlights that were applied to the 2020 release:

- Database passwords containing special characters are accepted
- Updated third party components to versions that address known security vulnerabilities.
- Log viewer filters are applied to exported log data
- Email addresses of users with a top level domain longer than 5 characters are accepted by WS_FTP Server
- The WS_FTP Server admin log on page renders correctly
- The installation documentation was updated to include the following important information:
Installing WS_FTP Server on a domain controller is not supported

For details of all of the fixed vulnerabilities and issues, see [Fixed Issues](#).

The WS_FTP Server UI and documentation were rebranded as *Progress WS_FTP Server*.

Support for WS_FTP Web Server will be deprecated in future releases.

Fixed Issues in 2020.0.0 (8.7.0)
